

International Chefs Day Garden Project

Let's Start

Now that we know about our 8 Hero Ingredients, let's have some fun and grow some of our own!

We have put together some easy tips for you to grow 3 of our favourite fruits and vegetables,

So, choose the plants you are interested in and check the best month to plant from the handy calendar.

Lastly, you will need to gather some materials before you start.

Now you are ready to grow!

Grow a garden

What you'll need

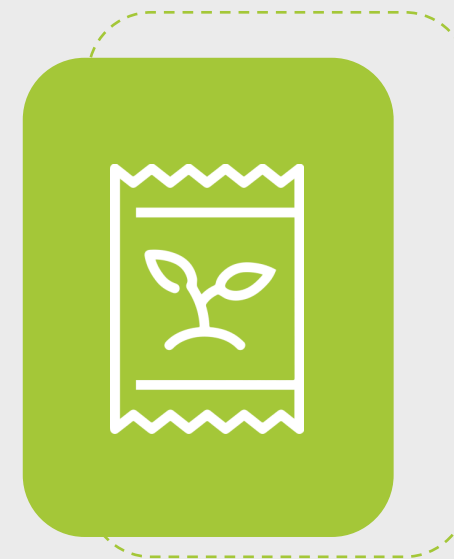

Cardboard egg carton

Scissors

Potting soil

Seeds

Waterproof plate or
tray to set the egg
cups on

Did you know?

Cardboard or paper-pulp egg cartons are great for sowing seeds as most are biodegradable*. Which means your seedling won't get stressed when they are transferred to a bigger container or raised bed because they don't need to be removed from the egg carton. They are also just the right size to get your seedlings started.

**Always refer to the recycling information on the egg carton before use.*

Grow a garden

Planting seeds

Step 1

Cut the cups of your egg carton apart and fill them half way with your potting soil.

Step 2

Add the seeds. Be sure not to add too many seeds to each egg cup. Overcrowded seedlings will often die off. Remember that not every single seed will sprout.

Grow a garden

Planting seeds

Step 3

Cover your seeds with a layer of potting soil. Remember to leave the soil slightly loose so your seed is able to germinate.

Step 4

Water your seed cups. The paper cups will soak up the water and keep your seeds moist.

Grow a garden

Planting seeds

Step 5

Place your seed cups on the waterproof tray in sunlight and make sure to water regularly.

Step 6

Use the calendar provided as a guide for when to transfer your seedlings to a bigger container or raised bed outside.

Tip

Write the names of your seeds on wooden ice cream sticks and stick them in the sides of your seed cups so that you know what seeds are growing in which cup.

Grow a garden

Planting information

Blueberries

6-8 hours of sunlight per day.
8 hours a day for better results.

Keep the soil moist but not drenched.
Blueberries can be water hungry so water often.

Grow a garden

Planting information

Carrots

Carrots prefer sunny locations. 6 to 10 hours of sun. The soil itself should be free-draining.

When transferring carrots to containers or raised beds, they should be at least 8 inches to 12 inches high (20 – 30cm).

Keep the soil moist with frequent shallow waterings. If you put your finger in the ground, it should be moist, but not wet.

Grow a garden

Planting information

Spinach

4 to 6 hours of sun. Spinach grows best in full sun or very light shade.

Spinach plants form a deep taproot; for best growth, loosen the soil at least 1 foot deep (30 cm) before planting.

Water spinach frequently to keep the soil evenly moist but not soggy. Regular watering is essential in warm weather.

PLANTING CALENDAR

Sow inside
Move outside
Harvest

	Direct sun	Germination	Days till maturity	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Good neighbours	Bad neighbours
 Blueberries		1 month	60-80 days													 Strawberries Blackberries	 Lettuce Tomato
 Carrots		7-14 days	60-80 days													 Beans & Peas Tomato	 Potato Parsnip
 Spinach		7-14 days	37-45 days													 Mint	

Please note. This calendar is an approximate guide only.
